### **Strict biosecurity recommended in the fight against African Swine Fever**

**Cologne** – With African Swine Fever (ASF) continuing its spread through Eastern and Central Europe and industry leaders warning pig producers about an increased risk of ASF reaching the UK, specialty chemicals company LANXESS is recommending the implementation of strict biosecurity protocols to help prevent the spread of the disease.

Stephan Cho, Head of Market Segment Disinfection in the Material Protection Products business unit (MPP) at LANXESS, explains the importance of biosecurity best practice in combating the risk that African Swine Fever poses to the European swine production industry: “Prevention comes first,” says Cho. “Biosecurity is the only real way of stopping the spread of the African Swine Fever virus onto and around a swine production facility. Producers need to achieve the highest possible levels of biosecurity, leveraged by good buy-in and compliance from management, their staff and their suppliers.”

As part of their commitment to providing biosecurity advice and support, LANXESS has launched the Virkon 360° Biosecurity campaign, focusing on the key elements of biosecurity best practice for surfaces, equipment, air, and drinking water delivery systems, highlighting their proven and trusted Biosolve heavy-duty cleaners and Virkon disinfectant formulations.

#### **Virkon S – proven effective against African Swine fever**

LANXESS offers swine producers the proven broad spectrum virucidal disinfectant Virkon S for ASF biosecurity prevention and control measures. Having been independently tested [passus with reference to the name of the institute deleted on 21.09.2018] for

## News Release

virucidal efficacy against ASF, Virkon S is proven to be effective against the virus at a dilution rate of 1:800, in the presence of organic challenge and at low temperatures (down to 4 °C) reflecting its proven performance and suitability for real world “on farm” conditions. In addition, LANXESS is offering swine producers timely advice on the clinical symptoms of ASF and guidance on implementing enhanced biosecurity protocols across the range of possible infection vectors, including wild boar and other animals, transport vehicles, housing facilities and personnel.

“Virkon S is a scientific breakthrough with performance characteristics that have defined biosecurity standards for over 30 years, making it the disinfectant of choice for swine housing, surfaces, equipment, vehicles and footwear. It is especially effective in combating the spread of disease via transport vehicles,” adds Cho.
